

VISION AND HEARING SCREENINGS

Via Hybrid Telehealth

Our team of Credentialed School Nurses provides virtual services to K-12 educational institutions in California. The equipment kit delivered to your school campus is fully controlled by our virtual Credentialed School Nurse, enabling vision and hearing screenings through hybrid telehealth.

EQUIPMENT

We will deliver a complete equipment kit to your school site. Simply establish a Wi-Fi connection, and you're ready to start screening.

VISION

We utilize a digital Vision Acuity Optotype Software to conduct distance and near vision screenings.

Virtual CSN has full remote control over the digital optotype, enabling the ability to adjust the display and distance settings and randomize the letters at any time.

HEARING

We employ a Pure Tone Type 3 Computer-Controlled Audiometer for conducting hearing screenings through hybrid telehealth.

The concept for students remains consistent: "Press the button (clicker) when you hear the sound."

Virtual CSN has full remote control over the audiometer settings, allowing for screening at the necessary frequencies and adjusting screening settings as required.
